Cao Hoang Khai

Backend Developer Intern
Can Tho City, Viet Nam
0834477131 | hoangcao230703@gmail.com

OBJECTIVE

With a deep passion for technology and a strong foundation in system development, I am looking for a creative work environment where I can apply the knowledge I have gained to solve real-world challenges. I am always proactive in learning, improving my skills, and striving to become a proficient BackEnd Developer.

EDUCATION

Can Tho University   **Can Tho City, Viet Nam**
Computer Science Student   2021 – Now

TECHNICAL SKILLS

Programming Language: Python, C, Java,PHP
Frameworks : Vue, Laravel
Database Management System: MySQL, SQLServer, MongoDB

PROFESSIONAL EXPERIENCE

Project: Book Borrowing Registration Website (1 member)   **09/02/2025 – 28/03/2025**

- **Repository:** https://github.com/CaoHoangKhai/LibraryConnect.git
- **Description:** Book Borrowing Management Website allows administrators to manage book loans/returns and maintain a list of borrowers. The website enables users to search for, track, register for borrowing books, and efficiently manage book returns.
- **Technologies: Front – end:**Vue   **Back - end:** NodeJS   **Database:** MongoDB

Project: Online Bookstore with Automated Data Integration (1 member)   **30/12/2024 – Now**

- **Repository:** https://github.com/CaoHoangKhai/BookVerse.git
- **Description:** Developed a platform for buying and selling books with features like product browsing and order management, news management, and user authentication. The system includes automated inventory synchronization, real-time data updates, and supports three roles: admin, seller, and user.
- **Technologies: Front – end:** HTML,CSS, JavaScript; **Back - end:** PHP; **Database:** MySQL

Project: Rice Classification on Rice Dataset (2 members)   **19/09/2024 – 28/11/2024**

- **Repository**: https://github.com/CaoHoangKhai/Rice_Classification.git
- **Description:** This is a machine learning application designed to classify rice grains into categories with high accuracy. It supports manual data input and provides predictions along with probability scores for each class. Additionally, users can select and compare prediction results from different machine learning models.
- **Technologies Used:** Python for model development, Flask for web integration

Project: Rice Selling Website (1 member)   **30/03/2024 – 17/05/2024**

- **Repository:** https://github.com/CaoHoangKhai/Website_Food_Marketplace.git
- **Description:** Developed a web-based rice selling platform with admin and user roles. Features include product, user, order, and contact management. Supports product browsing, order placement, authentication, and responsive UI.
- **Technologies: Front – end:** HTML,CSS, JavaScript; **Back - end:** PHP; **Database:** MySQL
